Template for Academic CV

YAML header (the first section)

- this section sets global configurations for the CV
- Choose whatever font you want. I usually go to Google Font to download the fonts into your local computer font folder

Some functions

- You should not change these functions unless you know what you are doing.
- `format_publications` function will set up the publications in a consistent formatting.
- Similarly for `create_table` function, this create tables that are consistent in style

read_csv

- there are two csv files i use to fill in information to load into the cv.
- I prefer to use csv to (1) automate the styling and (2) inputing data into csv is just easier than manually updating the cv

Samples

- this is how the template looks like here
- this is how my cv looks like here
